

CONTAINER TRACKING

Is it tough managing your container inventory? Is your supply chain suffering? Are you frustrated with poor container utilization, theft and ongoing customer service challenges?

At GPSit we believe **managing your remote container inventories should be easy and cost effective.** We help you address these challenges with GPS based container tracking.

Incorporating wireless GPS based container management into your strategy **delivers competitive advantage** to container owners, leasing companies, logistics service providers and virtually all transportation chain stakeholders .

BENEFITS SUMMARY:

- ✓ Improved container utilization
- ✓ More efficient yard and fleet operations
- ✓ Increased number of loads per container
- ✓ More timely and accurate billing
- ✓ Reduction in theft associated costs
- ✓ Improved customer service
- ✓ Improved return on container assets

Container tracking **utilizes rugged, long battery life GPS trackers** that provide on demand location information via wireless networks. Our web based TrackFusion application **enables easy access from virtually any device**, providing real time visibility of your containers location, status and usage history.
